

Concerning the 60 meter band allocation for Amateur Radio Operators, I would prefer sub-band allocations and the power limit at 200 watts output for all stations regardless of communications mode.

An equal 1/3rd split for the modes of CW, Digital, Voice (am & ssb & digital voice) would give everyone a chance to operate.

Keeping the maximum output power to 200 watts and operating sub-bands, would seem to make the best use of this new high frequency band approval and still allow for experimentation with antennas and radio communications modes and techniques.

Thank you for your consideration.
